DOCUMENT-IDENTIFIER: US 6013434 A

TITLE: Oligonucleotide-polyamide conjugates

## CLAIMS:

14. A method for detecting a polynucleotide <u>immobilized</u> to or otherwise associated with a support matrix, said method comprising contacting the support matrix with an <u>oligonucleotide</u> polymer conjugate according to claim 1, wherein the <u>oligonucleotide</u> portion of the <u>conjugate</u> is complementary to a portion of the target polynucleotide, and thereafter detecting hybridization of the <u>conjugate</u> to the support matrix.
